

Smart PDF Lecture Summarizer — 6x20 Pitch Deck

The Problem

Lecture PDFs are long. Exam prep takes too much time.

Lecture PDFs are dense — 30 to 60 pages each. Before exams, reading through every page and manually taking notes isn't practical.

Slide 2: The Solution

Smart PDF Lecture Summarizer

Upload a lecture PDF and AI generates everything needed to study:

Slide 3: Architecture

Frontend talks to Supabase. Supabase handles everything.

1. Upload PDF → Supabase Storage
2. Edge Function extracts text → sends to Claude
3. Claude generates summary, key points, flashcards
4. Output saved → results shown in browser

Slide 4: Key Features ✨

Feature	Description
 Drag & Drop Upload	Upload any lecture PDF, up to 25 MB
 AI Summary	Organized lecture notes with headings & key concepts
 Key Points	Critical topics most likely on the exam
 Flashcards	Click-to-flip Q&A cards for active recall
 Library	All past uploads saved, revisit anytime
 Private	Each user sees only their own documents
 User Accounts	Email + password via Supabase Auth

Slide 5: Tech Stack

Layer	Technology
Frontend	HTML + CSS + Vanilla JS
Auth	Supabase Auth
Backend	Supabase Edge Functions (Deno/TypeScript)
Database	Supabase Postgres
Storage	Supabase Storage
PDF Parsing	pdf-parse (npm)
AI	Claude API
MCP	GitHub + Supabase

Slide 6: Built with Claude Code

Built entirely with Claude Code — architecture, frontend, backend, and MCP integration.

Claude Code helped with:

- Full app design and architecture
- All frontend pages and styling
- Supabase Edge Function with PDF chunking
- Database schema, RLS, and storage policies
- Code review and debugging
- MCP configuration for GitHub + Supabase
